

Recycled TPE/Nylon

"eliminates wastage"

At Frameless Asia Pacific we take responsible production seriously; we are continuously working to find sustainable manufacturing solutions in order to minimize our impact on the environment.

While recycling is not a new topic, the importance and awareness surrounding this subject is increasing considerably - along with the innovative and sophisticated processes involved in production of recycled materials. It is evident that reusing materials has significant results on natural resources.

By reprocessing pre-consumer wastage of TPE and Nylon, we are able to create a recycled material that holds many of the same properties as the non-recycled original; it remains lightweight and durable, perfect for sportswear trims. Both Recycled TPE and Nylon can be up to 70% recycled material in content and made based on GRS standards.
